

WE OFFER THE FOLLOWING PRODUCTS:

- milk replacer **Lonolac Piglet** (6981)
- protein and lactose mix **Specilac** (6990)

Lonolac Piglet

A MILK REPLACER FOR PIGLETS

Intended use: milk replacer for piglets starting from the 2nd-3rd day of life.

Administration:

1. To prepare a drinking solution replacing or supplementing sow's milk.

The product should be dissolved in warm water (40-45°C) in a ratio of 1:6 – 1:7. Use 125-140 g of the product per 1 litre of water. The ready drinking solution should be used in the following situations:

- low sow lactation yield – a milk replacer can be an additional source of liquid feed.
- sudden sow deaths – in such situations the milk replacer can replace sow's milk completely. If this is the case, piglets should be fed 6-8 times daily during the first week. The daily ration per one piglet is 400-500 ml of the milk replacer. The drinking solution should have the body temperature. After the first week, the temperature of the drinking solution should be close to ambient temperature.

2. For loose feed mixes.

Lonolac Piglet should be used in prestarter feed mixes.

The product share in the mix should be 5-15%.

Lonolac Piglet makes it possible to:

- reduce animal feeding costs
- increase piglet growth rate
- stabilize intestinal microflora
- feed piglets with feed mixes free from antinutrient substances
- increase appetite in piglets

Specilac

Intended use: special protein-rich and lactose-supplementing additive for loose full-portion feeds.

Administration:

the product should be used in prestarter and starter feed mixes. Specilac is a high-quality feed additive designed in order to partially replace powdered milk in piglet feed. On account of its nutritive benefits and low price, it is a perfect supplement providing easily digestible protein, amino acids and lactose in concentrated feeds for young animals. The use of mixes containing Specilac makes it possible to considerably reduce the costs of piglet feeding. Feed mixes for pigs should contain 5-20% of the product depending on nutrition demands and the age of piglets.
